

Investment policy/strategy

The fund pursues an active management approach in relation to a benchmark (MSCI World High Dividend Yield Index (EUR)) in conjunction with a performance fee and promotes ecological/social characteristics according to Article 8 of Regulation (EU) No. 2019/2088 ("Sustainable Finance Disclosure Regulation"). When selecting assets, social and environmental exclusion and quality criteria are predominantly applied. The minimum share of investments in ecologically sustainable economic activities within the meaning of the Taxonomy Regulation is 0%.

The objective of the investment policy is to generate an increase in value over a long term while accepting high fluctuations in value. The equity fund invests at least 51% of the fund's assets (FA) in equities and equity-equivalent securities. The selection of equities is based on active screening, considering shareholder value aspects and the respective dividend policy. Issuers are not subject to any sectoral restrictions regarding their business activities. At least 50% of the equity assets are invested in companies with a market capitalization of more than 1 billion euros. In this process, a low portfolio turnover rate is also considered. Up to a total of 10% of the FA may be invested in bonds, other securitized debt instruments, or money market instruments issued by companies, governments, or other entities. Investments may also be made through funds, up to a maximum of 10% of the FA. Sight deposits and callable deposits may be held up to 49% of the FA.

Performance

The annual running costs such as management fees or other costs charged to the fund assets are already included in the performance figures shown (according to the OeKB method). They do not take into account a possible front-end load or redemption fee or various capital gains taxes. Furthermore, the custodian (e.g. bank) may charge custody account costs or similar at client level, which also reduce performance. Past performance results do not allow any conclusions to be drawn about the future development of a fund. Key figures and charts refer to the period since inception and are calculated on the basis of daily data. Source: MASTERINVEST Kapitalanlage GmbH.

Risk indicator

This indicator is based on historical data; It is therefore not possible to predict future developments. The classification of the fund may change in the future and does not represent a guarantee. Even a fund that is classified in category 1 does not represent a completely risk-free investment. The fund is classified in the 4 category because its unit price fluctuates greatly and therefore the Chance of winning, but also the risk of loss can be high.
